SUSCEPTIBILITY TO PUG DOG ENCEPHALITIS (PDE) REPORT

HELENE STROEMBOM
ENAKERSBY 320
ERIKSSUND
SE-74493 RUNHAELLEN
SWEDEN

Case: NCD32625
Date Received: 17-Aug-2015
Print Date: 21-Aug-2015
Report ID: 9428-6902-3947-5195
Verify report at www.vgl.ucdavis.edu/myvgl/verify.html

Name: PUGGENS MARGIT

Reg: SE24497/2014

DOB: 02/08/2014 **Sex:** Female **Breed:** Pug **Microchip:** 968000010168724 **Color:** fawn

Sire: ROSSMIX PIMMS

Reg: SE49002/2012

Dam: PUGGENS SOLVEIG

Reg: SE46166/2008

Susceptibility to Necrotizing Meningoencephalitis (NME)

N/S

Result Codes:

N/N: No copies of the NME associated markers (homozygous for normal). These dogs have a low risk of developing NME.

N/S: One copy of the NME associated marker (heterozygous for susceptibility). These dogs have a low risk of developing NME.

S/S: Two copies of the NME associated marker. These dogs are 12.75 times more likely to develop NME in their lifetime.

Note: This is not a diagnostic test for NME in Pug Dogs or for NME disease or risk in other breeds.

The test determines the risk for developing NME in Pug Dogs and aids in selecting matings that will produce puppies that are at decreased risk (N/N, N/S). Although 11% of Pug Dogs are S/S, only about 1 in 8 of this group will develop NME during their lifetime. Breeding out the S genotype is not advised as this could lead to considerable loss of genetic diversity in the breed. Matings to N/N dogs can be selected that will not produce S/S puppies.
